

## SQL Assignment

## Problem Statement:

You have successfully cleared the second semester. In your third semester you will work with joins and update statements.

## Tasks To Be Performed:

1. Create an 'Orders' table which comprises of these columns: 'order\_id', 'order\_date', 'amount', 'customer\_id'.
2. Insert 5 new records.
3. Make an inner join on 'Customer' and 'Orders' tables on the 'customer\_id' column.
4. Make left and right joins on 'Customer' and 'Orders' tables on the 'customer\_id' column.
5. Make a full outer join on 'Customer' and 'Orders' table on the 'customer\_id' column.
6. Update the 'Orders' table and set the amount to be 100 where 'customer\_id' is 3.
